

Development of a Survey System for ISF Synthesis

Everything starts with **context**

“The essence of technology is by no means technological.”

Why and how we do the survey is as important as what and where we survey.

Remember the **survey cycle**

The cycle is comprised of
social preparations and
technical iterations

The quality of the tools will
depend on the **quality of
the questions**

i.e. having a good master list of questions
before constructing the questionnaire

Open source: Why not?

Open source technologies are not THE answer, but they offer us **options** that can bring more participation and give us cost reductions in the long run.
